Data Analysis

Power BI / Excel & Google Sheet

Collaboration

MS Team / Discord / Slack / Zoom / Google Meet

DevOps

AWS & GCP Cloud Management / Git & Githubs / Cypress / Jest

PROJECTS

GoHighLevel Marketplace Payment Integration for Africa
Developed a custom marketplace payment application for Hordanso LLC to integrate GoHighLevel (GHL) with Paystack, enabling seamless payment processing for African currencies. This project bridged the gap between GHL's predominantly American and European market base and African users by facilitating transactions in NGN, KES, ZAR, GHS, and USD. Built a robust and scalable solution that streamlined payment collection for African businesses, enhancing accessibility and operational efficiency. Leveraged the MERN stack to create a user-friendly interface, secure backend, and efficient API integrations, ensuring reliability and compliance with regional financial regulations.

Web3Global Event Management App
Initiated the development of a cutting-edge event management application for Web3Global, a crypto consulting firm based in Nigeria. The platform is designed to support global outreach across Asia, America, and Africa, facilitating seamless event organization, ticketing, and participant engagement. Leveraged the MERN stack to build a secure and scalable solution tailored for the blockchain and crypto ecosystem, with features like smart contract integration and multi-currency support. The app aims to enhance Web3Global's ability to connect with diverse audiences, drive engagement, and showcase crypto consulting expertise on a global scale.

Domain Registrar Infrastructure & EPP Integration
Architected and deployed a fully functional domain registrar system for a tech company, enabling them to offer branded domain registration services. Provisioned a custom authoritative nameserver on Ubuntu EC2, configured BIND9 with CoCCA Registry integration, and implemented EPP (Extensible Provisioning Protocol) support for seamless communication with domain registries. Integrated WHMCS for billing and client management, Namecheap, Namesilo as domain vendors and developed additional custom functionalities to automate registration, DNS provisioning, renewals, and WHOIS lookups. Also, deployed RTILA RPA for automating provisioning of GoHighLevel website builder. Ensured a scalable and secure infrastructure, aligning with ICANN and registry compliance standards.

End-to-End CRM & Automation Systems with GoHighLevel
Led full-scale CRM implementations and automation systems for clients across Africa, Europe, and America using GoHighLevel (GHL). Built and optimized intelligent workflows, sales funnels, and appointment pipelines for agencies and SaaS businesses. Developed custom triggers, form-to-funnel automations, SMS/email sequences, and marketplace apps. Extended GHL functionalities using webhooks, and RESTful APIs; integrated white-labeled sub-account menus for GHL resellers. Connected with **Make.com** for advanced cross-platform automations and **Hookdeck** for managing multiple real-time webhooks at scale. Emphasized automation-driven scalability and user-centric CRM experiences, significantly improving operational clarity, lead conversion, and client retention.

Ovalpay - Stablecoin App
Among the Ovalpay Team that developed that highly-rated stablecoin for Off-ramp and On-ramp

VOLUNTEERING

[10/02/2020 – Current] Lagos, Nigeria
